Teo Punch system review

Falco Cup 2021 was organized at 10, 11, 12 September 2021. We have chosen TeoPnch system to try for punching and time keeping as believe this system will have future to become widely used at trail orienteering events. There are some evaluations on our experience of using it.

1. TeoPunch is more convenient and less expensive than SportIdent system we used before for same tasks. The only one unit is used at each control punching place instead of several (2 to 6) SportIdent units. There is no need of finding the decision to place several units at punching place. The competitor can punch his answer with privacy and there is no need to find privacy solution for organizers.
2. Competitor punching reading is almost the same as with SportIdent units. After punches has been readout, they are easily transferred to server. The only punching printing solution has to be found.
3. TeoPunch unit has WiFi functionality that enables organizers to plan the event with online results display. This functionality was not tested as requires more preparation for enabling WiFi coverage for whole event territory. We hope to test it in future.
